Callixte Nahimana - nacalli07@gmail.com

Full Stack Software Engineer with experience building customer-facing products and scalable backend services. Product-minded, with strengths in APIs, databases, debugging, and production ownership.

EDUCATION

Bachelor of Science in Computer Science and Mathematics
Wofford College, Spartanburg, SC, USA

EXPERIENCE

Dropbox – Software Engineer **Sept. 2019 – April. 2024**

- Designed, developed, and maintained backend services and APIs for new document signing features, applying system design, object-oriented principles, and scalable data structures to improve overall system usability and reduce time to complete document signing.
- Led the end-to-end development and deployment of the signature expiration date feature, improving the signature request lifecycle by enabling reminders and increasing successful signature completion within defined timeframes.
- Architected and optimized core signing logic to ensure data integrity, fault tolerance, and compliance with industry standards in AWS cloud environments, improving reliability of production signing workflows.
- Drove API design and service integrations used by internal teams and external customers, enabling extensible, maintainable signing functionality and faster delivery of new product features.
- Led internationalization and localization efforts across using agile methodologies, expanding the product to new regions, improving usability for global users, and supporting revenue growth.
- Actively participated in debugging, performance tuning, and on-call support to maintain high availability of mission-critical services and minimize user-impacting incidents.

Visa Inc. – Software Engineer – Innovation Platform **Jun. 2017 – Oct. 2018**

- Developed and tested prototype applications for an API management platform using mobile and web development technologies (Android Studio, Angular, and Node.js).
- Implemented RESTful API endpoints for microservices using Node.js and Spring, enabling seamless data access and communication.
- Engineered scalable back-end microservice architecture utilizing diverse data stores including PostgreSQL and MongoDB
- Contributed to the Android team for Visa Wallet implementation, ensuring secure and reliable mobile transactions.

Information Technology Software Engineer **July 2015 - Jun. 2017**
UND

- Demonstrated strong database skills by linking ServiceNow server to Center for Instructional & Learning Technology(CILT) local database, pulled data for report usage, and wrote queries that were used in the back-end of Bomgar periodical reports dashboard
- Designed the local database, stored procedures, automated scripts, and data input interfaces using SQL Server 2014
- Displayed effective team role and excellent communication skills when working with Desktop Support team to install, upgrade and fix classrooms equipments (mainly computers and projectors)
- Showed the ability to learn quickly and working independently during configuration and deployment of Papercuts(virtual printing software on campus) release station across campus kiosks, and Microsoft Deployment Tools on classroom desktops

Computer Science Department – Graduate Teaching Assistant
Aug 2015 – Dec 2016
UND

- Displayed planning and management skills while preparing weekly labs as well as in class activities
- Presented communication skills while teaching the first computer science in Java

COMPUTER SKILLS

- Python, Java, C++, PHP, JavaScript, Typescript, NodeJS**,** React, SpringBoot
