PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years building **large-scale distributed systems** serving 400M+ users at Microsoft and powering a high-volume platform at Intralinks. Skilled in **Java, C++, React**, and **cloud-native** infrastructure, with **full-stack** expertise and **backend** specialization. Proven in cross-team initiatives and delivering **high-performance microservices**.

SKILLS

Programming: Java, C++, Node.js, JavaScript/TypeScript, React.js, React Native
Frameworks & Architecture: Spring Boot, Hibernate, REST APIs, GraphQL, Microservices, Event-Driven Architecture
Databases & Caching: PostgreSQL, MySQL, MSSQL, DynamoDB, MongoDB, Redis
Cloud & DevOps: Azure (AKS, Event Grid), AWS (Lambda, API Gateway), Terraform, Kubernetes, Docker, CI/CD
Tools: Git, JUnit, Mockito, Maven, Gradle, Jest, Selenium, Webpack

WORK EXPERIENCE

Microsoft Remote
Software Engineer 2 *May 2022 – Present*

- Contributed to the **Vault data migration for 300M+ live users**, assisting in the design of core migration client algorithms that ensured 100% data integrity through checksum validation and end-to-end security.
- Collaborated with the **Sync AI V-Team** to develop **Agentic AI troubleshooters** and **MCP servers**, leveraging RAG patterns to automate diagnostics for complex distributed system failures.
- Resolved a critical reparse point error affecting **500K devices monthly**, directly boosting user retention by 25%.
- Architected **Continuous Access Evaluation (CAE)** protocols within the sync engine, enabling real-time Zero Trust security to protect documents from unauthorized access.
- Drove **ASHA (Happiness Score) to 99%** and improved NPS by optimizing on-call workflows and Azure monitoring.
- I**ntegrated sync engine logic with React Native frontend** during cross platform migration of all the UI surfaces.

Intralinks Waltham, MA
Senior Software Engineer *Jul 2019 – Apr 2022*

- Architected and delivered an enterprise-scale **REST API** platform using **Java 8, Spring Boot, and Hibernate ORM** on Tomcat, serving as backend for high-volume financial platform processing thousands of concurrent M&A transactions.
- Designed **OAuth2 and JWT authentication** architecture with token lifecycle management, refresh token rotation, and role-based access control (RBAC), securing 100K+ API requests daily with 85% test coverage (JUnit/Mockito).
- Optimized **DB performance** (schemas, indexes, Redis), reducing API response times and database load.
- Led architectural migration from monolithic BackboneJS application to **microservices** with **React microfrontends**.

ERT Boston, MA
Product Software Engineer Co-op *Feb 2018 – Dec 2018*

- Developed enterprise healthcare platform features using **Java, JSP, Struts**, enabling clinical trial workflows.
- Refactored the product architecture to remove **cyclic dependencies** and improved **Ant build** efficiency by 30%.

COMMUNITY IMPACT PROJECT

NextQart E-commerce Platform | Co-Founder & Lead Engineer

- Launched a grocery delivery platform helping 500+ students facing extreme Boston winters and limited transportation.
- Architected a serverless full-stack solution using **Angular** and **Firebase**, integrating **PayPal** API and real-time tracking.
- Rapidly scaled during COVID-19 to handle a 5x surge in order volume, providing an essential delivery lifeline.

LEADERSHIP & AWARDS

Mentored engineers and led "Brown Bag" sessions on Agentic AI for 50+ engineers to accelerate internal AI adoption.
Received **Invaluable Award (2021 & 2022)** for driving high-impact API improvements and database optimizations.
Microsoft Open Source Contributor; active in improving internal developer tooling and observability.

EDUCATION & CERTIFICATIONS

Master's, Computer Science | Northeastern University | GPA: 3.77 | 2017-2019
Certifications: Scrum Master I | AWS Cloud Practitioner
